

**DRMS DEMIL BULLETIN FY 07-04**  
**December 20, 2006**  
**GLO TAPE**  
**INFRARED REFLECTIVE MATERIAL**  
**INTERIM GUIDANCE**

Infrared Reflective Material (IR Glo Tape) found on camouflage shirts, jackets, coats and other upper body garments is Demil required and must be controlled in accordance with this Interim Demil Bulletin. All upper body garments should be checked for the “**Velcro Patch**,” a sign that the IR Glo Tape may be on the item. If the item has the Velcro patch the IR Glo Tape (usually gray or black about ¾ inches square) would be under a small flap, usually sewn on. **The Desert Camo has gray tape and the Woodland Camo has the black tape**, both are under a Velcro flap on either the shoulder or breast pocket and are **not visible unless the Velcro is peeled back**. The attached list of upper body garment NSN’s was loaded into the SALD system and will provide an alert upon receipt. **Note: IR Glo Tape could potentially be affixed to any item.**

EFFECTIVE IMMEDIATELY, DRMO’S ARE TO INSPECT ALL MILITARY CLOTHING UPON RECEIPT FOR IR GLO TAPE AND TAKE THE FOLLOWING ACTION:

**Receipt:** DEMIL Code “E” is assigned to any item that has the IR Glo Tape affixed to it. See attached list of articles known to have IR Glo Tape affixed and assigned DEMIL Code “E”. Any other article turned in with IR Glo Tape affixed must be managed as a DEMIL “E”. NSN clothing, equipment or articles with IR Glo Tape affixed, with a DEMIL Code other than “D” must be assigned and brought on record with a DEMIL Code “E”. Receiving personnel will process these items in DAISY using the LSN 9390-00-IRTEXT as outlined in DRMS-I 4160.14 Sec 2, General Processing, Chap 2 Property Accounting. IR Glo Tape, as an item, is assigned a DEMIL Code of “D”. Once the IR Glo Tape is removed the item will revert to its assigned DEMIL Code, IR Glo Tape will be brought on record as an LSN utilizing the 9390 Federal Stock Class (FSC) as a DEMIL Code “D”.

All textile batches currently in inventory suspected of having Glo Tape will be shipped via SLH transaction to the assigned Controlled Property Center (CPC) after End of Screening Date (ESD).

**Reutilization:** DRMO's may issue DEMIL "E" Textiles and Textiles located in batches, with Glo Tape, to DOD customers only. Code E items in batches must be brought back on record as individual items prior to issue. The DRMO will use the original turn-in DTID to XR1 the item. To issue the items from record, the DRMO will suffix the original batchlot requisition and issue to the customer. The suffix will begin with A, and continue until the requirement is satisfied. If requested, the DoD customer may draw the entire batch. DRMOs must ensure current customer verification procedures are performed prior to issue. **DRMO's will not issue any items with the IR Glo Tape to DODAACs: W91MQS or W9008Z.**

**Textiles with the Glo Tape attached will be reutilized only.** All remaining assets which are not reutilized are to be held in DRMO inventory until further guidance is issued with the exception of the textile batchlots which may contain Glo Tape, these batches will be transferred to the nearest Controlled Property Center (CPC) at ESD. For ease of identification, DRMOs should attach a sign to the pallet and/or box, "Glo Tape Textiles".

**Transfer and Donation and Sales:** Do not process to T/D/S until further notice.

This guidance applies to all DRMO's, CONUS and OCONUS.

If you have any questions, please contact Mr. Michael W. Riley, (DSN) 661-5749, or e-mail [Michael.Riley@dla.mil](mailto:Michael.Riley@dla.mil).
